Operating data

Data referring to 1m long diffusers, with a terminal throw velocity $V_t=0.25$ m/s and with a temperature differential of $10/12^\circ\text{C}$, in ceiling installations and with lateral air throw.

Data referring to diffusers without damper or with open sliding damper.

Data referring to diffusers with deflectors in the working position with a 50% reduction of the air passage surface.

The position of the deflectors reduces the effective cross-section. When the deflectors are fully open or when the diffuser is used for air exhaust, the flow rates expressed in m^3/h indicated in the table may be higher.

Vk: effective speed (m/s)

m^3/h : air flow rate

Pa: pressure drops in Pascal

L(m): air throw in metres

dB(A): noise level
